Which one would you like to try? Bitbucket

- Sign up to it. Done
  
- Take a look and check some differences between it and GitHub. Take screenshots to show them (at least two differences):

Difference 1: When creating a new repository:

Bitbucket has the default Branch name, forking and language settings

## Create a new repository

[Import repository](#)

Workspace  jInc123123123

Project name\*

Repository name\*

Access level ☒ Private repository  
Uncheck to make this repository public. Public repositories typically contain open-source code and can be viewed by anyone.

Include a README? Yes, with a tutorial (for beginne...

Default branch name

Include .gitignore? Yes (recommended)

Advanced settings

Description

Forking

Language

## Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

*Required fields are marked with an asterisk (\*).*

Owner \*

Repository name \*

 JLNC123123123

/

Great repository names are short and memorable. Need inspiration? How about [super-disco](#) ?

Description (optional)

☒  **Public**

Anyone on the internet can see this repository. You choose who can commit.

☐  **Private**

You choose who can see and commit to this repository.

Initialize this repository with:

☐ **Add a README file**

This is where you can write a long description for your project. [Learn more about READMEs.](#)

Add .gitignore

.gitignore template: **None**

Choose which files not to track from a list of templates. [Learn more about ignoring files.](#)

Choose a license

License: **None**

A license tells others what they can and can't do with your code. [Learn more about licenses.](#)

 You are creating a public repository in your personal account.

Create repository

Difference 2 Bitbucket has admin read and write and github only public and private

jlnC123123123 / hello / helloworld / Repository settings

Repository permissions

Add users or groups

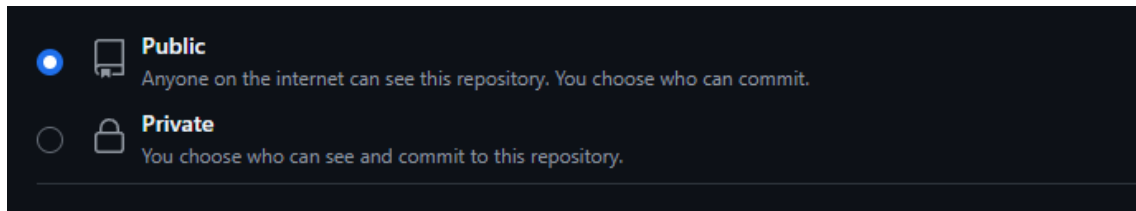

Repository permissions allow you to extend access beyond that already granted via [project permissions](#). In order to access the workspace, users must have [product access](#).

Search

Permissions

Access level

<input type="checkbox"/>	Name	Permission	Access level	Actions
<input type="checkbox"/>	 JLNC JLNC	<b>Admin</b>	Repository	<a href="#">Remove</a>
<input type="checkbox"/>	 JLNC JLNC	<div><div>Read</div><div>Can view, clone, and fork repositories.</div></div>	Project	
<input type="checkbox"/>	 bitbucket-admins-jlnc123123123 1 member	<div><div>Write</div><div>Can push code, create and merge pull requests.</div></div> <div><div>Admin</div><div>Can manage repository settings and users, delete repositories, and also inherits all Write permissions.</div></div>	Workspace	

- Create a public /private repository and create a document with the link and screenshots of the repository. Make sure to create a public repository I can access to it at least to read it.

Explain one thing you learn about GitHub you didn't know before reading the previous links.

I didn't know GitHub was part of Microsoft. I thought it was an open-source app without correlation to big companies.
